

# Work-In-Progress Tracking

Total transparency into manufacturing level

OOCL Logistics Work-in-Progress (WIP) Tracking begins from PO acknowledgement and continues until the product or shipment is ready to enter the logistics transport chain. Our Podium® based system supports tracking at both order and SKU levels and allows for very specific customer defined event monitoring to accommodate many different kinds of product line manufacturing processes – from apparel to e-goods OOCL Logistics has your needs covered.

Estimated completion dates are calculated from Earliest / Target Ship Dates and VendorPodium WIP supports replies to open questions, in addition to event date displays. WIP status can be accessed anytime online in Podium® and WIP Summary Reports are generated daily and sent to you by e-mail, providing instant updates of production status.

Progress summary is provided to advise customers of the latest development of the purchase order. Vendor KPI is also available to measure the vendors' performance in production. With other VendorPodium capabilities in purchase order communication and ePacking list, as well as shipment booking, vendor management now becomes more reliable, extensive and easy.

WIP tracking services also handle purchase orders with shipments managed by logistics companies other than OOCL Logistics so you can fully integrate your supply chain visibility. Above all VendorPodium WIP is simple, easy-to-use and can be implemented quickly at low cost.

## VendorPodium WIP benefits

- WIP tracking in a low cost ready to use package
- Enhance and ensure quality and timely tracking
- Flexibility enables different degrees of tracking for various types of orders
- WIP statistics offer visibility to areas for supplier process improvement
- Facilitate quick decision making for changes in product supply

WIP Tracking is a PODIUM® product.
